Preqin's February benchmarks indicate that it was a relatively flat month for most funds. Hedge funds targeting Asia-Pacific markets continued their strong start to the year as Japanese stocks maintained an upward trajectory. Most hedge fund strategies were marginally positive but macro funds posted losses (-0.19%) and the decline experienced by CTAs saw their cumulative performance over the last year turn negative (-1.69%).

Despite largely unimpressive returns over the last year, the hedge fund asset class continues to play an important role in the portfolios of investors that seek diversification and capital preservation. Less than one-quarter (22%) of funds made a loss over the last year and most vehicles posted a return in excess of 6%. This is illustrated in Fig. 2, which plots the cumulative returns of individual hedge funds and CTAs in the 12 months since February 2012.
