Fundraising
Number of funds closed has dropped, yet aggregate capital secured remains steady.

Fund Managers
An increasing proportion of emerging markets-focused funds are being managed from outside the region.

Investors
Majority of investors in emerging markets are based in emerging Asia.

Performance
AUM of emerging markets-based firms reached record levels in 2015.

Deals
Overview of buyout and venture capital deals in the region.

Regional Breakdowns
Plus, analysis of fundraising and deals in each sub-region.
Foreword

The definition of emerging markets has changed significantly over the last decade as macroeconomic and geopolitical factors have affected countries and regions in different ways. To ensure the data we provide is a better representation of private equity* investment trends, we have expanded our definition of emerging markets to also include frontier markets**.

The last five years have seen increased participation in emerging markets from international GPs, from managing only 23% of funds closed in 2011 to 67% for funds so far this year. While market volatility and geopolitical factors made 2015 a challenging year for emerging markets-focused private equity fundraising, GPs are still willing to invest in these less established regions due to the strong demographics and potential for strong returns. Despite a slowdown in fundraising over 2015, the long-term potential for private equity in emerging markets remains; with a large gap between the top and bottom performers, those GPs that can navigate emerging markets do very well. This has been recognized by many of the leading fund managers; KKR has set aside $100mn for investment in Africa, while Carlyle Group is back on the fundraising trail with its fifth Asia-focused growth fund.

The number of buyout deals in emerging markets has weakened in recent years, although aggregate value has risen to record levels: 2015 saw 430 deals announced or completed in emerging markets for a combined $53.4bn. Meanwhile, venture capital activity has flourished, and 2016 should be another year of growth for the venture capital industry in emerging markets: the aggregate value of venture capital deals in H1 2016 has already reached $29.8bn, an increase of 7% from H1 2015.

This report takes a detailed look at the private equity industry in these regions, including fundraising, active institutional investors, deals and performance. This report supplements the information available on Preqin’s Private Equity Online service, which contains details on over 750 emerging markets-focused funds currently in market, over 23,000 completed buyout and venture capital transactions and over 840 institutional investors based in emerging markets that are active in the asset class. We hope you find this report useful, and welcome any feedback you may have. For more information, please visit www.preqin.com or contact info@preqin.com.

*Private Equity includes Buyout, Venture Capital, Growth, Turnaround, Balanced, Co-Investment, Co-Investment Multi-Manager, Direct Secondaries, Private Equity Secondaries and Private Equity Funds of Funds. It excludes Real Estate, Infrastructure, Private Debt and Natural Resources.

**For the purposes of this report, emerging markets include all countries in Central & Eastern Europe, Latin America (South and Central America, the Caribbean), Africa, the Middle East (excluding Israel) and Asia (excluding Japan, Hong Kong and Singapore). For a full list of the countries we have included please contact: info@preqin.com.

As illustrated in Fig. 1, emerging markets-focused fundraising has varied over time both in terms of the number of funds closed and the aggregate capital raised.

Following the Global Financial Crisis (GFC), the amount of capital secured by emerging market funds dropped from $63.0bn raised by 245 funds closed in 2008 to $25.9bn secured from 196 vehicles closed in 2009. In 2010 and 2011 fundraising recovered swiftly, with the number of emerging markets-focused funds closed reaching an all-time high by 2011 (335), securing $68.7bn. As the more developed economies in Western Europe and North America struggled to shake off the recession, some emerging economies proved more resilient, with India and China registering double-digit GDP growth in 2010. Unsurprisingly, a growing amount of institutional capital was redirected to these countries and, as a result, the proportion of total private equity capital raised by emerging markets-focused funds grew from 6% in 2009 to 17% in 2011 (Fig. 2).

However, since 2012 the number of emerging markets-focused funds reaching a final close has fallen annually, although capital raised has fluctuated; 2014 represented a record year for emerging markets-focused fundraising in terms of capital raised ($69.2bn), with 235 vehicles closing. Fundraising was bolstered by a number of large fund closures: 18 funds closed on $1bn or more, most notably Carlyle Group’s fourth Asia-focused buyout vehicle, which secured $3.8bn.
Geographic Breakdown

Funds investing in emerging Asia continue to attract the majority of capital directed towards emerging markets, accounting for 77% of total fundraising in 2015. However, the amount of capital secured by emerging Asia-focused funds decreased from $56.5bn in 2014 to $30.7bn in 2015 (Fig. 3). The commodity-reliant economies of Latin America and the Middle East also saw a reduction in capital raised over this period of $5.2bn and $0.9bn respectively. Russia’s mounting economic problems overshadowed the improving macroeconomic environment across much of Central & Eastern Europe, where fundraising declined slightly to $2.0bn in 2015.

Despite ongoing concerns over slowing growth in Sub-Saharan Africa, Africa as a whole experienced significant growth in capital raised from $1.6bn across funds closed in 2014 to $4.5bn in 2015, a record for the region. Africa has become increasingly attractive to investors, buoyed by its young population and growing middle class.

Strategies

While buyout vehicles dominate fundraising in the established markets of North America and Europe, venture capital and growth funds have together raised the majority (55%) of emerging markets-focused capital since 2008 (Fig. 4). Furthermore, the number of venture capital and growth funds that have held a final close since 2008 (859 and 625 respectively) greatly exceeds that of buyout funds over the same period (249). Nevertheless, buyout remains an important strategy among emerging markets-focused fund managers and accounts for nine of the 10 largest emerging markets-focused private equity funds closed since 2013 (Fig. 6).

As shown in Fig. 5, from 2011, the proportion of emerging markets-focused funds raised by firms headquartered elsewhere has steadily increased. Fifty-one percent of emerging markets-focused funds that held a final close in 2015 were raised by managers based outside the region, compared with 23% in 2011. The largest fund raised by an emerging markets-based manager is Inventis China Growth USD Fund VI, which closed on $3bn in September 2014 and is the only non-buyout fund to make the top 10.

Largest Funds

Eight of the 10 largest private equity funds to close since 2013 that focus on investments in emerging markets have been raised by managers based outside these regions (Fig. 6). The largest of these is the 2013 vintage KKR Asian II fund, which secured $6.0bn, while Affinity Asia Pacific Fund IV ($3.8bn), PAG Asia II ($3.7bn) and RRJ Capital Master Fund ($3.5bn) also raised considerable amounts of capital.

Emerging markets-based fund managers have raised an aggregate $322bn for private equity vehicles in the last 10 years. The majority of emerging markets-based private equity fund managers are concentrated in Asia, specifically Greater China, although there are large numbers in Central & Eastern Europe, South Asia, the Far East and Sub-Saharan Africa (Fig. 7).

Naturally, North America and Europe are home to more experienced fund managers (Fig. 8). Over half (52%) of emerging markets-based fund managers have raised only one fund previously, a larger proportion than those headquartered in both North America (42%) and Europe (38%). A greater proportion (69%) of emerging markets-based fund managers have raised less than $250mn over the last 10 years than any other region (Fig. 9).

Investors

Preqin’s Private Equity Online platform currently tracks 848 emerging markets-based investors that are active in private equity, with aggregate assets under management (AUM) of approximately $20tn.

In developed countries, the most prevalent investors actively investing in private equity are typically pension funds, sovereign wealth funds, foundations, endowment plans and wealth managers. However, the most prevalent emerging markets-based LPs in private equity are banks/investment banks and corporate investors, which each account for 17% of the investor pool (Fig. 11).

Emerging markets-based investors account for approximately 14% of all investors in private equity globally. As shown in Fig. 12, half of these are located in emerging Asia*. Greater China, the most prominent location for investors based in emerging markets, accounts for half of investors based in emerging Asia* and a quarter of all investors based in emerging markets. Additionally, South America-based investors make up approximately 71% of investors in the Latin America region; as regulation governing South America-based investors has become less restrictive, we have seen more investors in the region make their first investments in private equity.

Emerging markets-based investors show some similarities in their investment preferences to North America- and Europe-based investors. As seen in Fig. 13, venture capital is the most sought-after investment strategy in all three regions, with growth and buyout vehicles also prominent across all investors. However, emerging markets-based investors display a greater preference for growth investments, whereas there is a greater focus on buyout vehicles by investors located in the developed regions.

Emerging markets-based investors have an average current allocation to private equity of 12.9% of their total assets and an average target allocation of 15.3%, suggesting they are likely to commit more capital to the asset class in the coming years in order to reach their desired level of exposure. A survey of more than 100 institutional investors in private equity in H1 2016 showed that the largest proportion of LPs see Asia as presenting the best opportunities, specifically China and India (Fig. 14).

---

*See page 2 for definition.
With emerging markets-based investors continuing to commit capital to private equity strategies in recent months (Fig. 15), as well as planning to invest in the asset class in the coming year (Fig. 16), these investors will be crucial to the growth of private equity in emerging markets and beyond. As economic conditions in different regions fluctuate and the investor community grows in sophistication, emerging markets-based investors are set to play an ever more prominent role within the private equity asset class.

Source: Preqin Private Equity Online
As seen in Fig. 17, the assets under management* of emerging markets-based GPs has increased to record levels. In 2014, emerging markets-based fund managers distributed more capital to investors than they called for the first time and continued to do so in the first three quarters of 2015 (Fig. 18).

The median net IRRs of emerging markets-based funds have generally been rising since vintage 2008 (Fig. 19). The median net IRR of 2010 vintage funds (10%) is up from 2009 (8%); however, the top quartile net IRR boundary for 2010 vintage funds increased significantly from the previous year. This trend of a larger gap in performance between the median net IRR and the top quartile boundary has been present since 2010, and while this trend is more akin to pre-crisis performance, all IRR boundaries of 2010 vintage funds are higher than that of 2006 vintage funds.

*Preqin defines a firm’s assets under management as the sum of its dry powder and the unrealized value of portfolio assets.
The number of private equity-backed buyout deals in emerging markets increased from 529 investments completed in 2008 to 690 in 2011 (Fig. 21), while the aggregate deal value increased by 16% to $33.6bn. Since 2012, the number of deals in emerging markets has declined but aggregate deal value has continued to rise; 430 deals were announced or completed in 2015 with a combined value of $53.4bn.

Asia has accounted for the majority (55%) of buyout deals in emerging markets since 2010 (Fig. 22).

The aggregate exit value in emerging markets has increased substantially in recent years, from $27.7bn in 2013 to $47.1bn in 2015, with IPOs the most common exit route for buyout deals since 2009 (Fig. 23).

Fig. 24: Largest Private Equity-Backed Buyout Deals in Emerging Markets, 2010 - 2016 YTD (As at 1 June 2016)
The number of venture capital deals across emerging markets has increased steadily each year, from 625 deals in 2009 to a record 3,456 deals in 2015 (Fig. 25). Furthermore, 2015 represented a record year for the aggregate value of deals in emerging markets ($50.1bn), a 112% increase on the value of financings the previous year. 2016 looks set to be another strong year, with the aggregate value in H1 already reaching $29.8bn, an increase of 7% from H1 2015.

Emerging Asia** has dominated the venture capital industry in emerging markets since 2010, accounting for 84% of the total number of financings (Fig. 26). In 2015, emerging Asia represented 93% of the number of financings and 98% of the value.

Prequin: Global Data and Intelligence

With global coverage and detailed information on all aspects of the private equity asset class, Prequin’s industry-leading Private Equity Online services keep you up-to-date on all the latest developments in the private equity universe.

Source new investors for funds and co-investments

Find the most relevant investors, with access to detailed profiles for over 6,200 institutional investors actively investing in private equity, including future fund searches and mandates, direct contact information and sample investments.

Identify potential investment opportunities

View in-depth profiles for over 1,700 private equity funds currently in market, including information on investment strategy, geographic focus, key fundraising data, service providers used and sample investors.

Find active fund managers in private equity

Search for firms actively targeting private equity investments. View information on key contacts, firm fundraising and performance history, and applied strategies of the firm when investing in portfolio companies and assets.

Analyze the latest private equity fundraising activity

See which firms are currently on the road raising a private equity fund and which will be coming to market soon. Analyze fundraising over time by fund strategy and location.

See the latest buyout and venture capital deals and exits

View details of more than 150,000 buyout and venture capital deals, including deal value, buyers, sellers, debt financing providers, financial and legal advisors, exit details and more. Identify forthcoming exits and expected IPOs.

Benchmark performance

Identify which fund managers have the best track records, with performance benchmarks for private equity funds and performance details for over 5,400 individual named funds.

Examine fund terms

See the typical terms offered by funds of particular types, strategies and geographical foci, and assess the implications of making changes to different fees.
